

New REICH Caravan and Trailer Maneuering Systems

Enhanced performance and comfort at a reduced price

ESCHENBURG – REICH have expanded their product pipeline of maneuvering systems for caravan, boat, and horse trailers, now offering five models and thus the perfect solution for each application. Maneuvering single axle trailers with a total weight of up to 2,000 kg and tandem trailers of up to 3,000 kg now is a piece of cake. Apart from the technical improvements, our drives are also rather attractive in the price department.

At the touch of a button the new CrossMover automatically pivots towards the trailer tires. In doing so, its big drive rollers will settle independently of each other into position until an optimum pressure on the tires has been reached. It goes without saying that the REICH system with its softstart and softstop features provides for a smooth maneuvering with millimeter precision as well as a smooth start on every conceivable surface. Among other things the Safety Control function provides for a safe stop on steep inclines, automatically protecting the maneuvering drive from overload. For only Euro 1,499.- the customer will obtain an automatic maneuvering drive for the price of a manual system.

In the MoveControl Compact REICH now incorporated larger cable cross sections and a motor with more performance to increase power, improve the system's climbing capacity and to reduce power consumption. A new fastening kit will simplify assembly. The new version of the MC Compact stands out due to its black cover and the new logo.

REICH reduced the RRP price of the MoveControl Comfort to Euro 1,695.- and of the MoveControl Economy to Euro 998.- New electronics and a new remote – which the RK Mover received as well – will make handling procedures even more simple.
